

# A quick guide to setting up your integration

## 1. Contact your Entrata administrator/account manager.

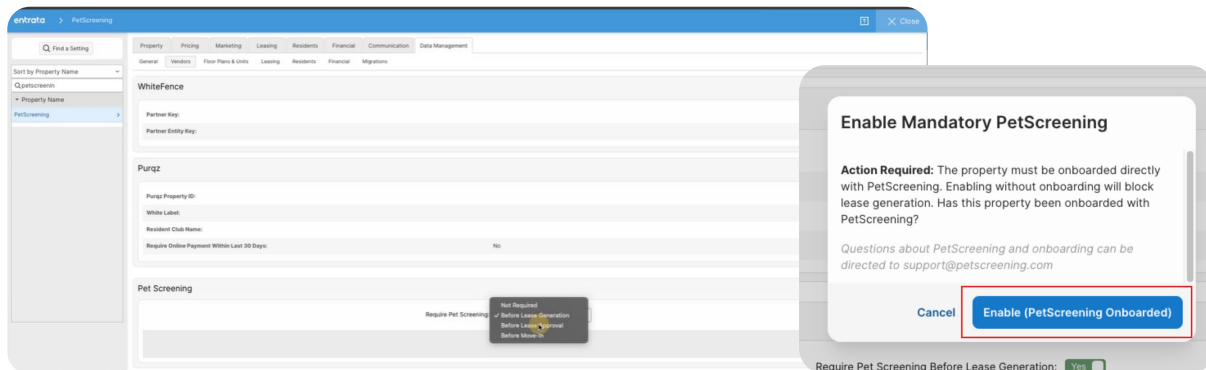

Connect them with the PetScreening team to review the following steps (if needed).

## 2. Create & send PetScreening your Entrata Corp ID.

An example of what PetScreening will need from you is the Corp ID from your Entrata login URL (<corp id>.entrata.com).

## 3. Customize where PetScreening is required.

- Go to Setup > Properties
- Choose your property
- Navigate to Data Management > Vendor
- Toggle "Require PetScreening Before Lease Generation" and select the desired validation point.
- When prompted, click "Enable (PetScreening Onboarded)" to confirm your setup.

(For existing PetScreening customers only)

## Reset PetScreening's Data Permissions.

If you're using the legacy integration, click "Reset to Default" in your data permissions. This will apply the new **PetScreening default permissions**, replacing the old settings.
